Integration of the Semantic Web and Model-Driven Software

Fernando Silva Parreiras

Integration of the Semantic Web and Model-Driven Software Fernando Silva Parreiras

The next enterprise computing era will rely on the synergy between both technologies: semantic web and model-driven software development (MDSD). The semantic web organizes system knowledge in conceptual domains according to its meaning. It addresses various enterprise computing needs by identifying, abstracting and rationalizing commonalities, and checking for inconsistencies across system specifications. On the other side, model-driven software development is closing the gap among business requirements, designs and executables by using domain-specific languages with custom-built syntax and semantics. It focuses on using modeling languages as programming languages.

Among many areas of application, we highlight the area of configuration management. Consider the example of a telecommunication company, where managing the multiple configurations of network devices (routers, hubs, modems, etc.) is crucial. Enterprise systems identify and document the functional and physical characteristics of network devices, and control changes to those characteristics. Applying the integration of semantic web and model-driven software development allows for

- (1) explicitly specifying configurations of network devices with tailor-made languages,
- (2) for checking the consistency of these specifications
- (3) for defining a vocabulary to share device specifications across enterprise systems. By managing configurations with consistent and explicit concepts, we reduce cost and risk, and enhance agility in response to new requirements in the telecommunication area.

This book examines the synergy between semantic web and model-driven software development. It brings together advances from disciplines like ontologies, description logics, domain-specific modeling, model transformation and ontology engineering to take enterprise computing to the next level.

From reader reviews:

Gloria Duncan:

Book is to be different per grade. Book for children till adult are different content. As we know that book is very important normally. The book Integration of the Semantic Web and Model-Driven Software seemed to be making you to know about other know-how and of course you can take more information. It is rather advantages for you. The book Integration of the Semantic Web and Model-Driven Software is not only giving you more new information but also to be your friend when you really feel bored. You can spend your current spend time to read your guide. Try to make relationship with the book Integration of the Semantic Web and Model-Driven Software. You never feel lose out for everything in the event you read some books.

Linda Carroll:

The reason why? Because this Integration of the Semantic Web and Model-Driven Software is an unordinary book that the inside of the book waiting for you to snap the item but latter it will zap you with the secret this inside. Reading this book close to it was fantastic author who all write the book in such amazing way makes the content within easier to understand, entertaining way but still convey the meaning fully. So , it is good for you because of not hesitating having this any longer or you going to regret it. This unique book will give you a lot of advantages than the other book have got such as help improving your proficiency and your critical thinking way. So , still want to delay having that book? If I were being you I will go to the e-book store hurriedly.

Vincent Johnson:

Reading a book for being new life style in this 12 months; every people loves to read a book. When you go through a book you can get a lot of benefit. When you read guides, you can improve your knowledge, because book has a lot of information in it. The information that you will get depend on what types of book that you have read. In order to get information about your examine, you can read education books, but if you want to entertain yourself look for a fiction books, these us novel, comics, in addition to soon. The Integration of the Semantic Web and Model-Driven Software will give you new experience in studying a book.

Caroline Gonzalez:

Is it anyone who having spare time in that case spend it whole day by watching television programs or just lying on the bed? Do you need something totally new? This Integration of the Semantic Web and Model-Driven Software can be the answer, oh how comes? The new book you know. You are thus out of date, spending your free time by reading in this completely new era is common not a nerd activity. So what these guides have than the others?
