Carbon Nanotubes: Science and Applications

Carbon Nanotubes: Science and Applications

Carbon nanotubes, with their extraordinary mechanical and unique electronic properties, have garnered much attention in the past five years. With a broad range of potential applications including nanoelectronics, composites, chemical sensors, biosensors, microscopy, nanoelectromechanical systems, and many more, the scientific community is more motivated than ever to move beyond basic properties and explore the real issues associated with carbon nanotube-based applications.

Taking a comprehensive look at this diverse and dynamic subject, **Carbon Nanotubes: Science and Applications** describes the field's various aspects, including properties, growth, and processing techniques, while focusing on individual major application areas. Well-known authors who practice the craft of carbon nanotubes on a daily basis present an overview on structures and properties, and discuss modeling and simulation efforts, growth by arc discharge, laser ablation, and chemical vapor deposition. Applications become the focal point in chapters on scanning probe microscopy, carbon nanotube-based diodes and transistors, field emission, and the development of chemical and physical sensors, biosensors, and composites.

Presenting up-to-date literature citations that express the current state of the science, this book fully explores the development phase of carbon nanotube-based applications. It is a valuable resource for engineers, scientists, researchers, and professionals in a wide range of disciplines whose focus remains on the power and promise of carbon nanotubes.

Editor Meyya Meyyappan will receive the Pioneer Award in Nanotechnology from the IEEE Nanotechnology Council at the IEEE Nano Conference in Portland, Oregon in August, 2011

From reader reviews:

Karen Arsenault:

Hey guys, do you would like to finds a new book to learn? May be the book with the title Carbon Nanotubes: Science and Applications suitable to you? Typically the book was written by well known writer in this era. Typically the book untitled Carbon Nanotubes: Science and Applications is the main of several books this everyone read now. This kind of book was inspired many people in the world. When you read this e-book you will enter the new dimensions that you ever know before. The author explained their thought in the simple way, consequently all of people can easily to be aware of the core of this book. This book will give you a large amount of information about this world now. In order to see the represented of the world with this book.

Antione Wilson:

Reading a e-book can be one of a lot of activity that everyone in the world adores. Do you like reading book consequently. There are a lot of reasons why people love it. First reading a publication will give you a lot of new facts. When you read a reserve you will get new information because book is one of various ways to share the information or maybe their idea. Second, studying a book will make you more imaginative. When you examining a book especially fiction book the author will bring you to imagine the story how the people do it anything. Third, you could share your knowledge to other individuals. When you read this Carbon Nanotubes: Science and Applications, it is possible to tells your family, friends in addition to soon about yours publication. Your knowledge can inspire others, make them reading a publication.

Jeremy Quick:

The publication with title Carbon Nanotubes: Science and Applications possesses a lot of information that you can understand it. You can get a lot of advantage after read this book. This particular book exist new information the information that exist in this reserve represented the condition of the world right now. That is important to yo7u to be aware of how the improvement of the world. This kind of book will bring you with new era of the glowbal growth. You can read the e-book with your smart phone, so you can read the idea anywhere you want.

Brett Nash:

People live in this new day time of lifestyle always attempt to and must have the time or they will get wide range of stress from both way of life and work. So , once we ask do people have free time, we will say absolutely indeed. People is human not only a robot. Then we question again, what kind of activity are there when the spare time coming to an individual of course your answer will certainly unlimited right. Then ever try this one, reading guides. It can be your alternative inside spending your spare time, the particular book you have read will be Carbon Nanotubes: Science and Applications.
