**The Earth-Sheltered House: An Architect's Sketchbook (Real Goods Solar Living Book)** Malcolm Wells

It's a classic by a legend. Mac Wells has always had a different way of looking at architecture and the building process.

Here's another principle so simple and so logical that it has nearly disappeared from the architectural radar screen. Animals (including early humans) know that the best way to stay warm in winter and cool in summer is to surround the living space with the insulating power of the earth. Combine the thermal properties of earthen walls (or "berms") with simple principles of passive solar energy, and you have a foundation for unbeatable energy efficiency.

The Earth-Sheltered House makes its cogent case by using the author's futuristic illustrations. The script is written in the author's own hand, giving this book a personal feel as if it was created especially for each individual reader.
